Client: The Home Depot — Ecommerce Platform

- Developed and optimized React/Next.js components for a high-traffic ecommerce platform serving millions of monthly users across product discovery and purchase journeys.
- Built reusable product and content modules used across product listing, search, and checkout flows, reducing UI development time by **30%**.
- Improved Core Web Vitals and page load performance by implementing SSR, caching, and code-splitting, reducing load times by **25–30%**.

- Partnered with product, UX, and analytics teams to deliver customer-facing features that improved engagement and supported A/B testing and data-driven decisions.
- Contributed to a scalable design system and helped modernize legacy frontend architecture into modular React/Next.js applications.

Additional Client Projects (Government & Enterprise Platforms)

- Delivered customer-facing modules for a government platform used by **10K+ users**, collaborating with backend teams to define API contracts and optimize Next.js + Spring Boot integrations.
- Developed and maintained large-scale React/Next.js applications supporting **50K+ users**, implementing server-side caching and scalable REST APIs.
- Led Angular-to-React migration initiatives, improving maintainability and standardizing reusable UI patterns across applications.
- Engineered end-to-end features across React, Java, and Python microservices and optimized SQL queries and REST endpoints for large datasets.
- Achieved **100% Section 508 accessibility compliance** and improved page performance by **25%** through collaboration with design and QA teams.
- Mentored junior engineers, conducted **60+ code reviews**, and implemented CI/CD pipelines that reduced deployment time by **40%**.
